Customer Workloads are Demanding Real-time Data Insights

Volume

Data growth projected to Reach 163 zettabytes by 2025

Velocity

Billions of data entries each day

Variety

Structured & unstructured data driven by big data & IoT

Be Revolutionary.

Introducing the 9200 NVMe™ SSD Where Capacity Meets Tenacity

High-performance NVMe SSD;
designed for data ingest, OLTP, caching

First mainstream, Micron NVMe SSD
to deliver greater than 10TB

The 11TB 9200 ECO SSD is **45% faster**
than a competing NVMe SSD

Be Revolutionary.
Be SOLID.

**Based off public information, as of Aug 8, 2017, measuring against 100% 4K random writes
*8KB Block Size, 70/30 Read/Write Mix, Queue Depth 8 – Commonly considered a synthetic proxy for real-world OLTP traffic

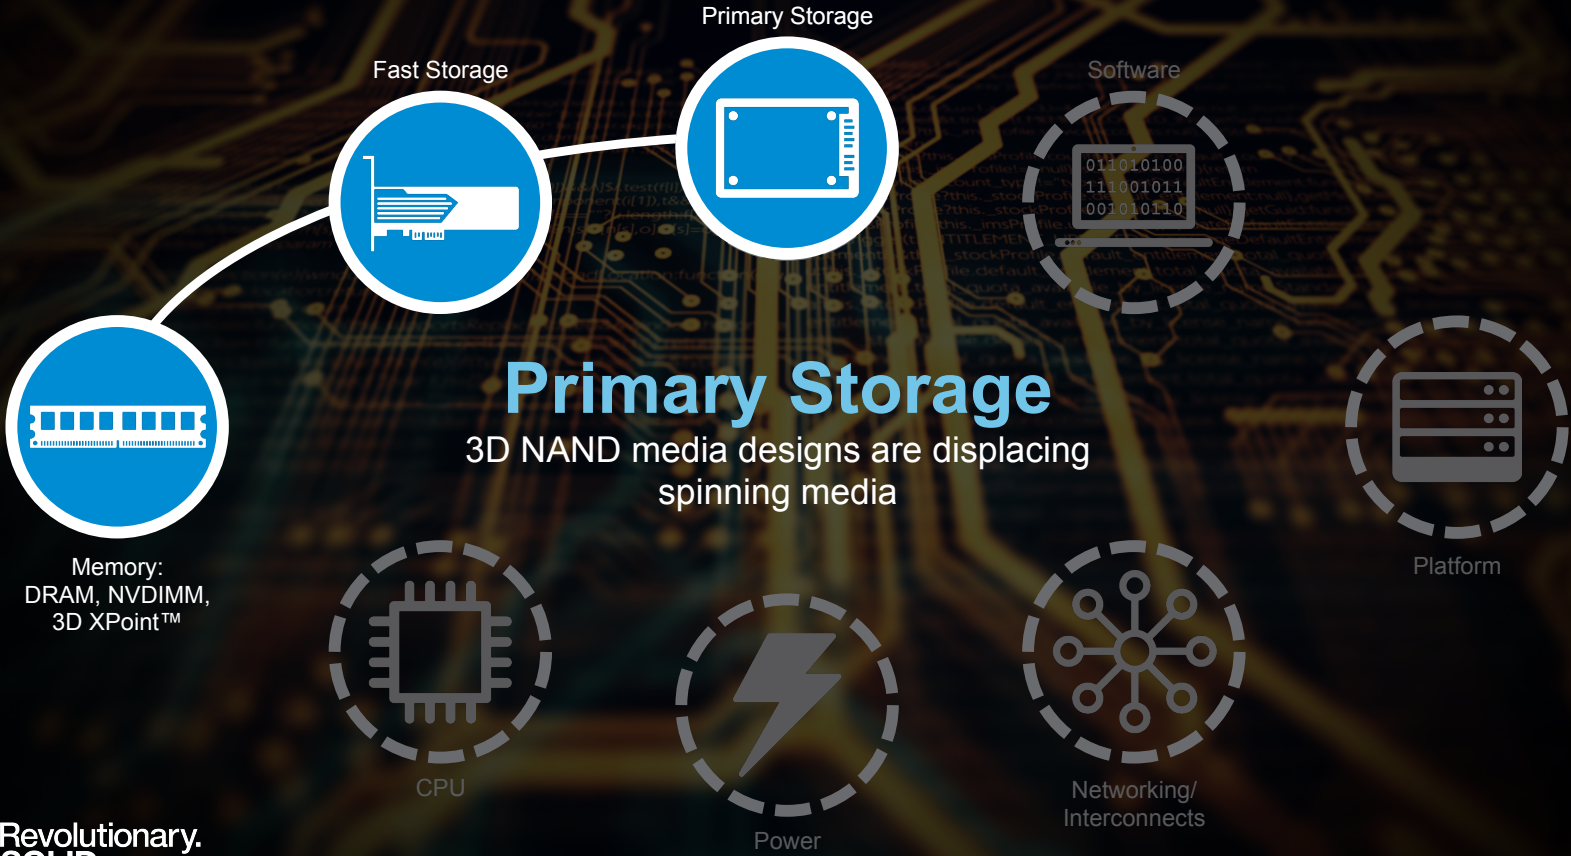

Solid State Builds Apps That Are More Responsive

Flash Media Innovation, Chipping Away at Hard Drives

2016: Planar NAND media **discontinues** 15K Enterprise hard drive development

2017: 3D NAND TLC media **displaces** 10K Mission Critical Enterprise Hard Drives

2018 and Beyond: 3D NAND QLC media **challenges** 7200 Nearline Hard Drives

Be Revolutionary.
Be SOLID.

Better SSDs Come From Better NAND

Micron
512Gb TLC
4 planes, 64kB parallelism
Floating Gate + CMOS
Under the Array

512Gb TLC 64 Tier – Gb/mm²

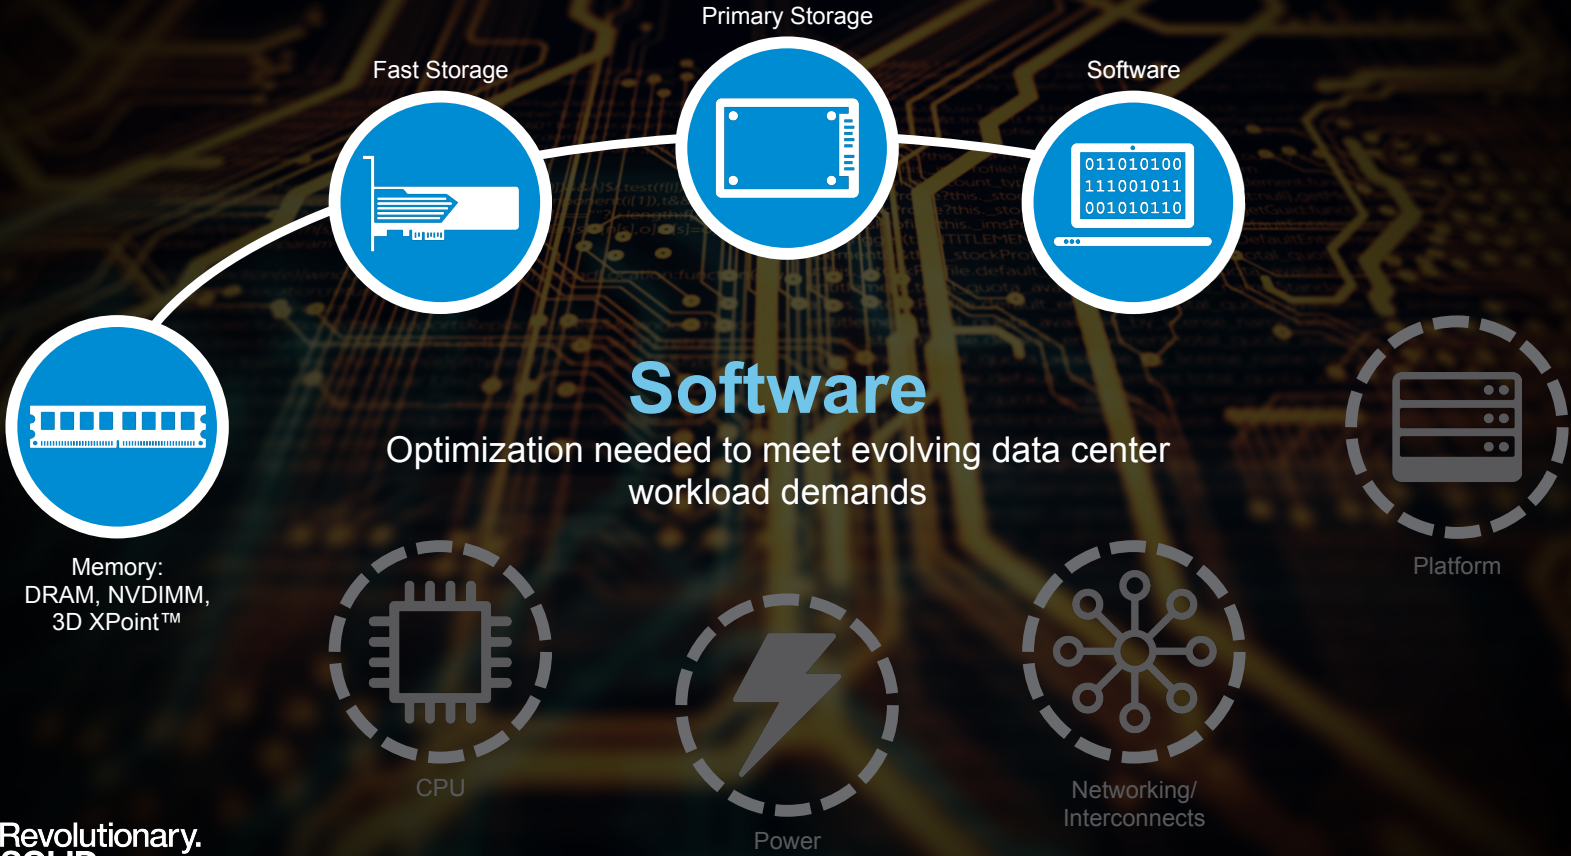

Micron flash technologies deliver better

- Densities
- Throughput
- Power efficiency

Be Revolutionary.
Be SOLID.

System Architecture

Limitations of Traditional Storage Software

Built for spinning media

Layered services, leads to additional latency

Contributes to system write amplification

Doesn't fully realize benefits of flash & SSDs

What if Software Was Optimized for Flash?

End-to-end Optimization of the Stack from the Application to the Media

Order of magnitude improvement in SSD performance

Reduced latency & improved Quality of Service

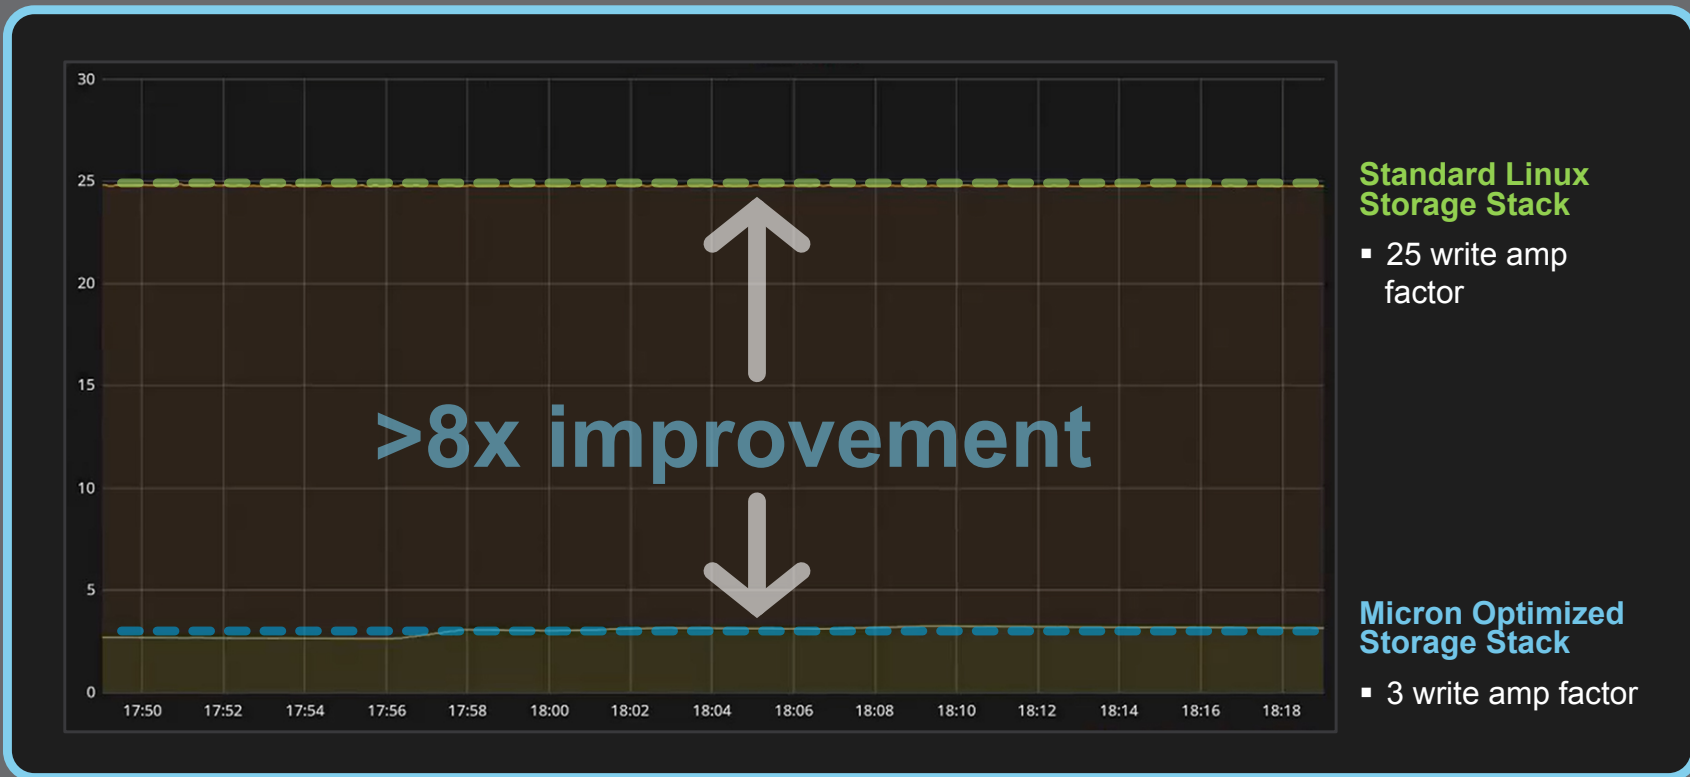

Higher endurance through more effective drive writes per day

Lower OPEX through reduced system energy consumption

What is: Lower System Write Amplification

Be Revolutionary.
Be SOLID.

What is: More Database Operations Per Second

Be Revolutionary.
Be SOLID.

What is: Reduced Latency, Quicker Application Response

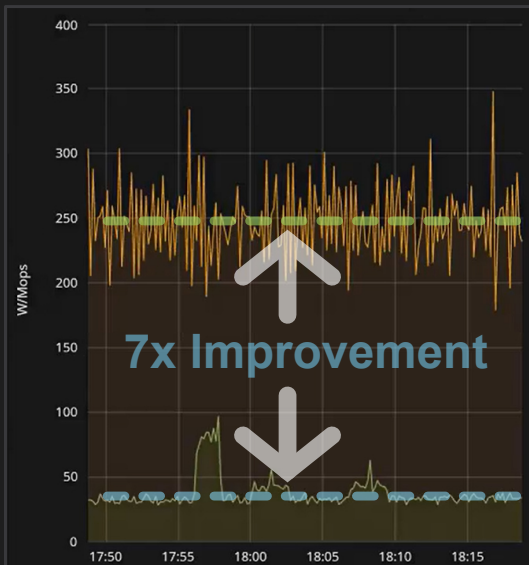

Be Revolutionary.
Be SOLID.

What is: Better Power Profile

Drive Power Consumption

Standard Linux Storage Stack

- 247 W/Mops average

Micron Optimized Storage Stack

- 37 W/Mops average

System Power Consumption

Standard Linux Storage Stack

- 2.2 kW/Mops average

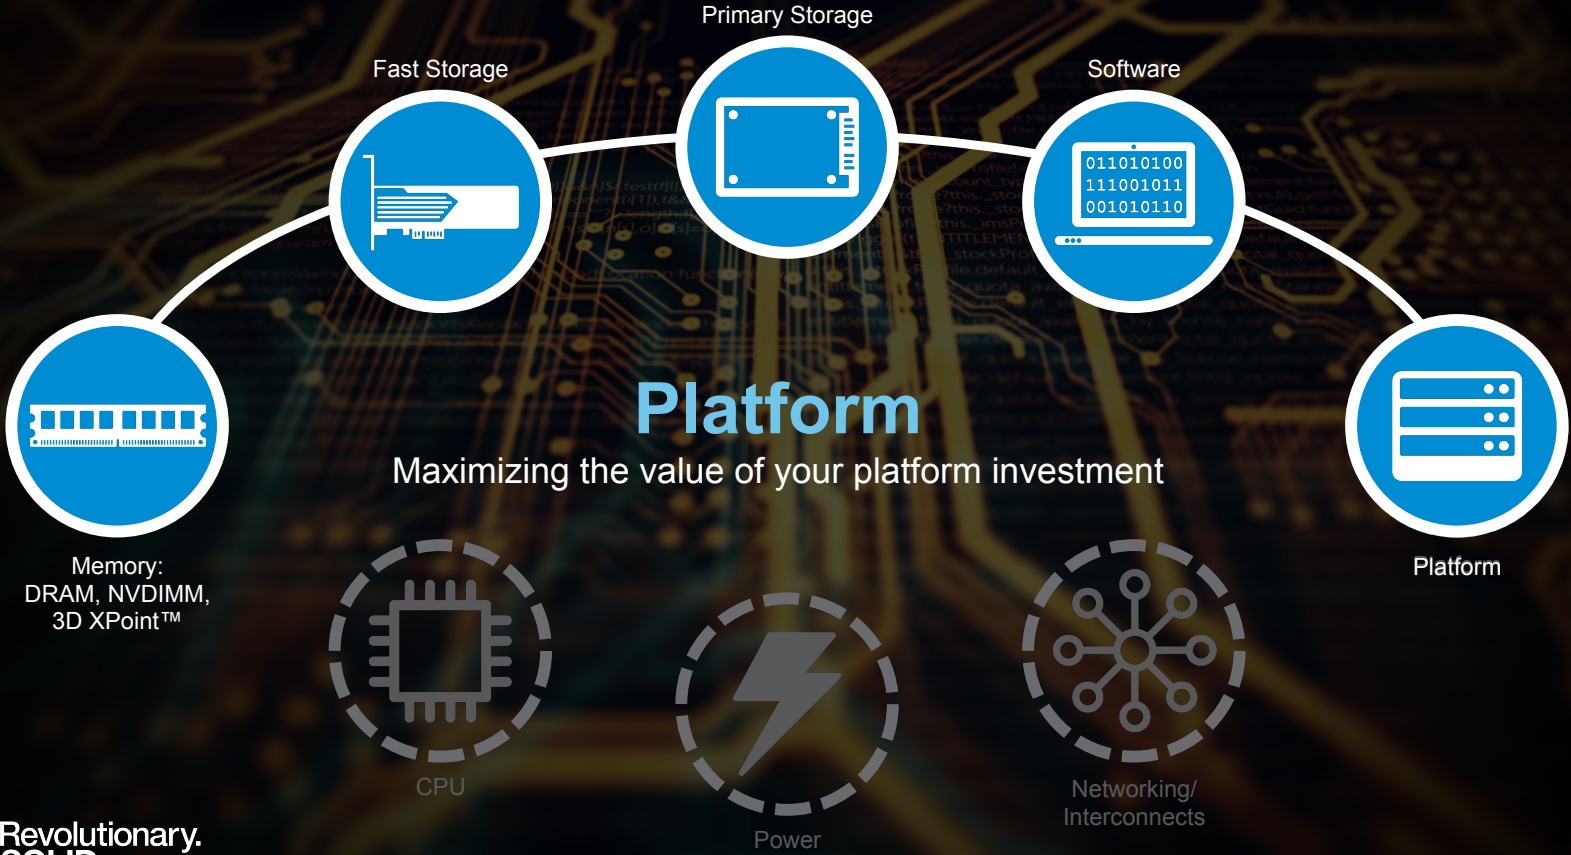

Micron Optimized Storage Stack

- 0.3 kW/Mops average

Be Revolutionary.
Be SOLID.

System Architecture

Be Revolutionary.
Be SOLID.

Micron

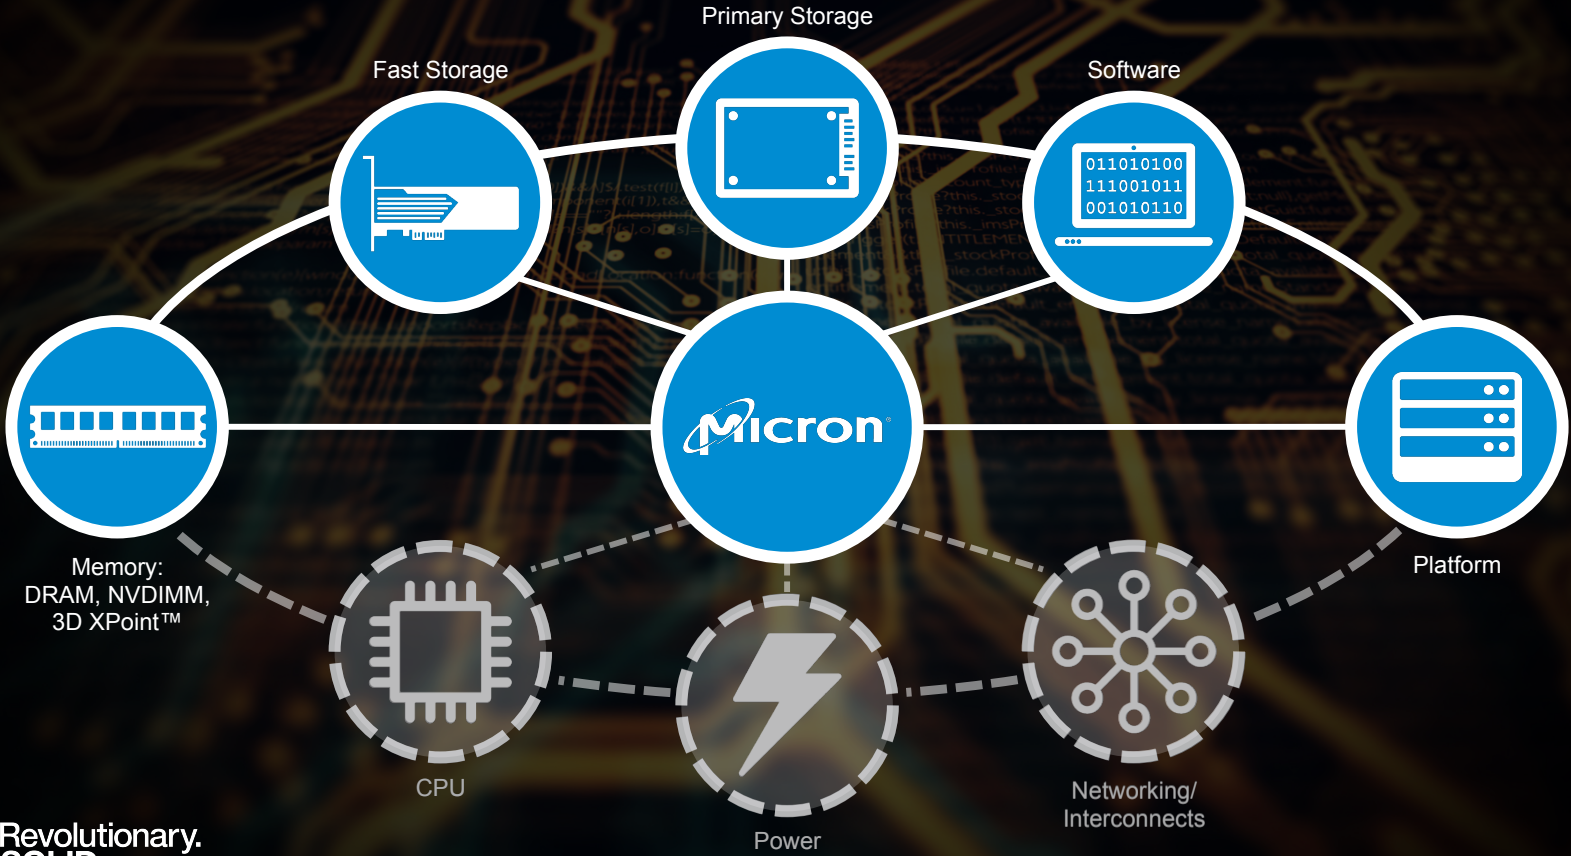

SOLIDSCALE™

Platform Architecture

- Exceeding 5M IOPS/U
- Achieving 11 GB/s in application traffic
- 1% or less incremental latency vs. in-server NVMe

System Architecture
