# Storage for AI

Presented By

Shashidhar Joshi, Principal, Microsoft Swapna Yasarapu, Principal, Microsoft

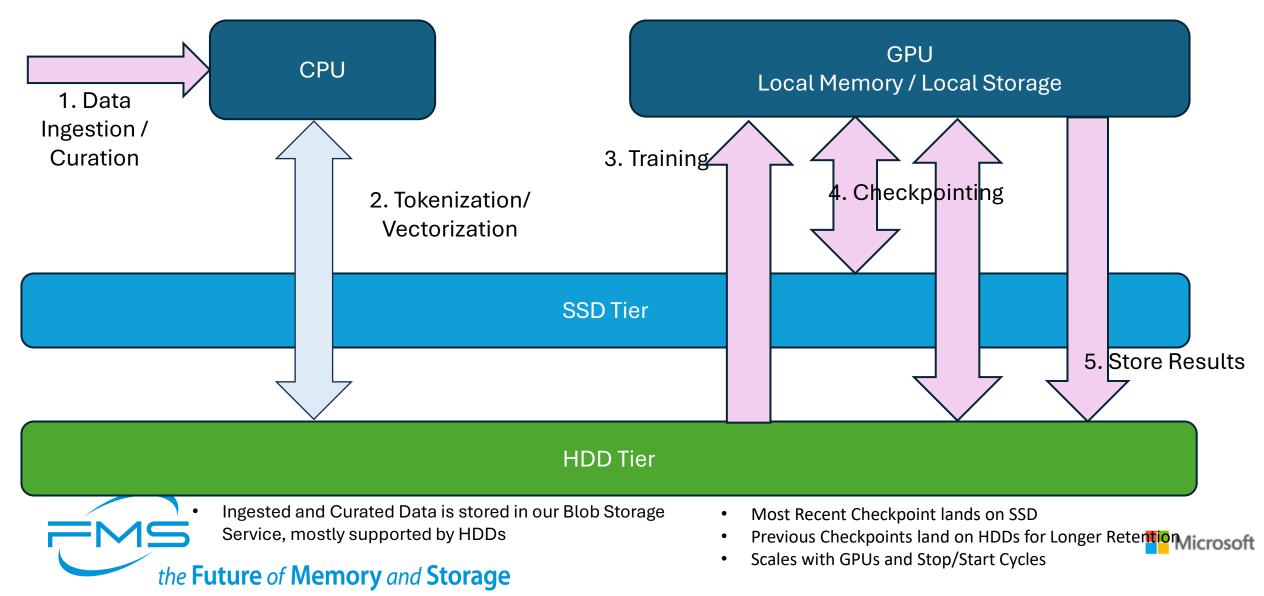

### Al Model Training

	Data Ingestion and Curat	ion Data Tokenization	Model Pre-Training	Model Fine Tuning	Model Inferencing
Stage	Collect, Curate, Prepare Data	Translate to Model Parameters	Prelim Model Learning and Training, Checkpoint	Targeted Model Learning & Training, Checkpoint	Use Model for Service
Tier	Storage and Compute	Compute	Storage and Compute	Storage and Compute	Compute
Impact	Data Growth Workload Performance		Data Growth Performance Retention	Data Growth Performance Retention	
					Micro

the Future of Memory and Storage

oft 

#### Al Data's Journey through Storage Tiers

#### Al Storage Demand and Performance

	Data Ingestion	Data Curation	Training and Checkpoint
Data Growth	<ul><li>Data Generation</li><li>Data Acquisition</li></ul>	<ul> <li>Model Parameters representative of the Curated Data</li> </ul>	<ul> <li>Model Parameters and GPU Count</li> <li>Frequency of Checkpoint</li> <li>Data Retention</li> </ul>
Performance	<ul> <li>System Level Tbps/PB (Read/Write)</li> <li>Device Level Mbps (Read/Write)</li> <li>IOPS (Read/Write)</li> <li>Latency</li> </ul>	<ul> <li>System Level Tbps/PB (Read)</li> <li>System Level Latency ms (Read)</li> <li>Device Level Mbps (Reads)</li> </ul>	<ul> <li>System Level Tbps/PB (Read/Write)</li> <li>System Level Latency ms</li> <li>Device Level Mbps (Read/Write)</li> <li>Latency</li> </ul>
Workloads	<ul> <li>Raw Data</li> <li>Structured and Unstructured Data</li> <li>Text, Videos, Images, etc.</li> </ul>	<ul> <li>Vectorized/Structured</li> <li>Reduced footprint</li> <li>Large block data sets</li> </ul>	High Read and write throughput     workloads scaling with GPUs count

the Future of Memory and Storage

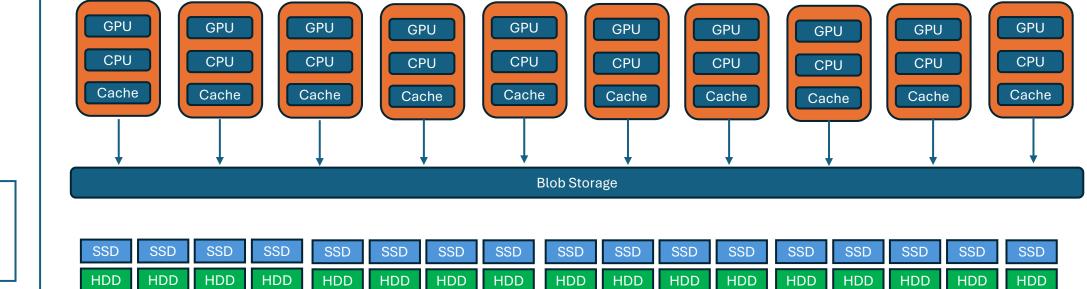

#### Checkpoints: Driving Capacity and Thruput on Storage

A simple monolithic AI Training HW System

Scaling of GPUs as a function of Training Demand and Fetching of Checkpoints

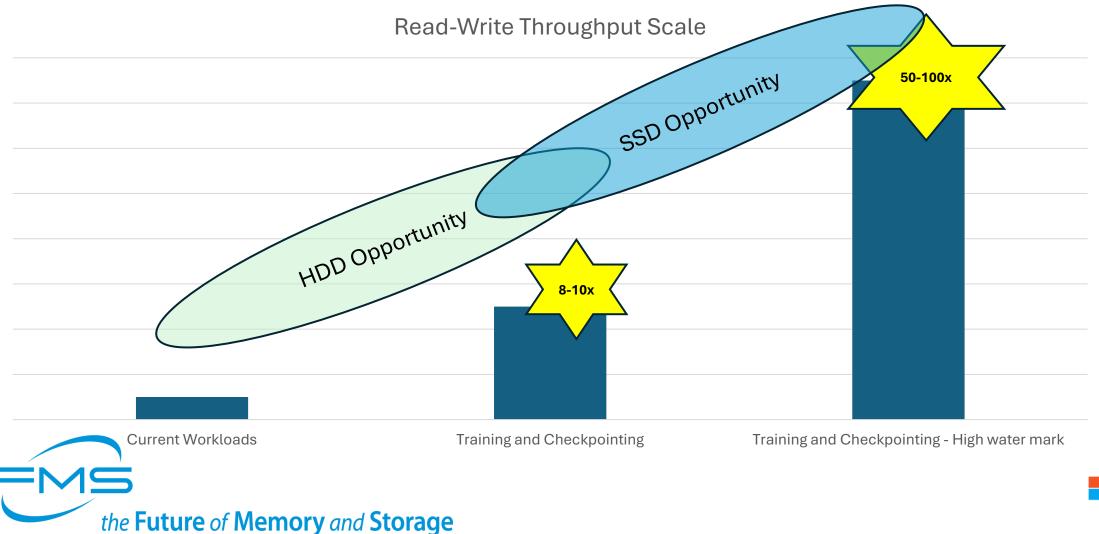

- Checkpoint Frequency: Model and Customer Unique. More Frequent Checkpoints lead to more Storage
- Most Recent Checkpoint Data: Most Recent copy available in SSD tier for low latency access
- Older Checkpoint Data: On HDD Blob Storage Tier, available but slow to access when needed
- GPU Scaling: All at once access from Blob Storage Tier drives high thruput

#### the Future of Memory and Storage

## AI Workload Implications: MB/s/TB

### Media Technologies - Call to Action

#### HDDs

#### SSDs/Flash

- Power Efficiency Management
- Scale Throughput Density with HDD Capacity

- Density Scaling
- Drive TCO Improvement while delivering on the throughput-Density-Power
- Step Function Improvement in Bit Cost

## Questions?
